

Ashish Bhatt

Software Engineer, Ghaziabad, Uttar Pradesh, India

Email: bhattashish210@gmail.com LinkedIn: [/in/ashishbhatt210/](https://www.linkedin.com/in/ashishbhatt210/) Phone: +91 8448706390

ACCOMPLISHMENTS

- **Rising Star of Zone Award** – Honored by the **Engineering Director** for **exceptional performance, technical innovation, and impactful contributions**.
- **Standing Ovation Recognition** – Awarded for **outstanding contributions and high-impact delivery** during the **Sep '24 – Nov '24 Release Quarter**.
- **Applause Award** – Recognized for **dedication, problem-solving, and excellence in execution** during the **Jun '24 – Aug '24 Release Quarter**.
- **Top 4.39% coders globally on LeetCode**; **4-star Coder** with **1000+ problems solved** and **Max Contest Rating-1902 (Knight Badge)**.
- **4-star Coder on CodeChef** with **Max Contest Rating-1858**; achieved **Global Rank-1** in CodeChef May Long Two.
- Achieved **All India Rank 41** and **Global Rank 577** in **LeetCode Weekly Contest 295** out of 23k+ participants; **Winner of NeuraHacks 2022** on Devpost.
- Solved **1500+ DSA Problems** on different coding platforms.

SKILLS

Languages: Java, JavaScript, TypeScript, Python, Perl, C++, SQL, PostgreSQL.

Frameworks & Cloud: Spring Boot, React, Angular, Node.js, Express.js, AWS (Lambda, S3, SageMaker), Azure OpenAI, Kafka, REST APIs, Microservices, Firebase.

GenAI, LLM & ML: OpenAI GPT, Azure OpenAI, LLaMA 3.1, Hugging Face, LangChain, RAG, Fine-tuning LLMs, Vector Databases (FAISS, Pinecone), Ontology-based AI, Linear/Polynomial Regression, Random Forest, Time-Series Anomaly Detection.

Tools & Fundamentals: Git, Perforce, Linux/Unix, JIRA, Grafana, Graylog, Data Structures, Algorithms, OOP, DBMS, Computer Networks.

PROFILES

- **Codechef:** [Codechef/sobersoul](https://www.codechef.com/users/sobersoul)
- **Leetcode:** [Leetcode/bhattashish210](https://leetcode.com/bhattashish210/)
- **Github:** [Github/ashishbhatt210](https://github.com/ashishbhatt210)
- **Codeforces:** [Codeforces/bhattbhai](https://codeforces.com/profile/bhattbhai)

WORK EXPERIENCE

- **Clearwater Analytics** March 2026 – Present
 - Software Development Engineer III
 - ◎ **Project: Alternative Assets & MLx**
 - **Spearheaded the end-to-end Unitization feature** for **Limited Partnerships (LPs)**, a previously unsupported capability in Clearwater, by designing **data model and schema changes, backend logic in Java/Spring Boot**, and **React/TypeScript UI for unit input and display**; **shipped to production** and **unlocked the European market segment** for the platform.
 - **Designed and developed** backend services for the **Alternative Assets & MLx platform** using **Java** and **Spring Boot**, supporting investment accounting and reporting workflows for institutional clients.
 - **Built full-stack features** end-to-end by integrating Java microservices with **React and TypeScript**-based front-end components, delivering **responsive interfaces** for portfolio analysts.
 - **Developed REST APIs and Kafka-based event-driven pipelines** to handle **high-volume asset data ingestion**, processing, and downstream propagation across multiple services.
 - **Engineered AWS Lambda functions and S3 integrations** to enable **serverless data processing** for alternative asset workflows, improving throughput and reducing infrastructure overhead.
 - **Integrated Generative AI capabilities** using **OpenAI and Azure OpenAI APIs** into the MLx platform, enabling **intelligent automation** for asset classification, data extraction, and analyst productivity.
 - **Optimized PostgreSQL queries and JPA data access patterns**, reducing latency on critical asset retrieval endpoints and improving **overall system responsiveness**.
- **athenahealth** July 2023 – March 2026
 - Member of Technical Staff | Secondary Team Lead & Scrum Master
 - ◎ **Project: GenAI & ML Initiatives**

- **Automated** business knowledge model (BKM) document generation using **Generative AI**, reducing **manual effort by 40-50 hours per sprint** and **minimizing developer dependency**.
- **Developed an AI-driven Rulespec Generator** using **Python, Azure GenAI API, and NLP techniques**, cutting **manual analyst effort by 70%** and achieving **90% accuracy for simple rules** and **75% for complex rules**; further boosted **LLM inference accuracy from 70% to 85%** and slashed **validation time from 8 hours to 1 hour** via an **ontology-based AI pipeline**.
- **Engineered an AI-powered BKM Doc Generator** leveraging **OpenAI's LLMs** and **LLM-based embeddings**, reducing **documentation time from 30-60 minutes to just 5 minutes** and accelerating **document processing speed from 50 to 200 documents/day**.
- **Built an automated rule creation framework**, transforming a **2-3 day manual process into a 1-hour AI-powered workflow**, earning recognition for **innovation and operational impact**.
- **Fine-tuned LLaMA 3.1** on **AWS SageMaker** using **48x-large GPU clusters**, optimizing **rulespec generation and contextual extraction models** and enhancing **LLM accuracy and efficiency**.
- **Designed an anomaly detection POC** for **athenaOne** system health and performance metrics, experimenting with **Linear and Polynomial Regression, Random Forest, and time-series-based statistical models** to **proactively surface performance regressions** and **reduce mean-time-to-detect**.

◎ **Project: athenaOne**

- **Led multiple POCs** to **analyze, detect, and eliminate performance bottlenecks**, significantly **enhancing system scrub efficiency**.
- **Migrated** business rules from a **monolithic Perl-based system** to a **scalable Java-based microservices architecture** and developed **custom rule engine plugins**, automating **rule execution and management**.
- **Built and maintained** internal **developer productivity tools**, enhancing **code quality, debugging efficiency, and software health**.
- **Implemented and optimized** business logic for **multiple microservices** using **Java, Spring Boot, and RESTful APIs**, ensuring **scalability and improved DB performance via query optimization**.
- **Designed and implemented UI Testing & Claim Overrides** along with **automated testing workflows**, enabling **seamless UI-driven claim modifications** and increasing **test execution speed and accuracy**.
- **Drove team agility** as **Scrum Master** leading **sprint planning, stand-ups, grooming, and retros**; partnered with the **Team Lead** on **roadmap planning and story scoping**, and **mentored team members on technical design and best practices**.

➤ **Compro Technologies**

April 2022 – July 2023

→ Associate Software Engineer

◎ **Project: CambridgeOne**

- **Engineered end-to-end development** with **Angular, Vue, and Node.js**, delivering **dynamic and responsive frontend and backend components** via **Agile and Test-Driven Development**.
- **Created Node.js and Express.js functions** to power seamless **FrontEnd integration** with backend services, including **in-house DLS systems, AWS, GetStream, PubNub, Heroku, and more**.
- **Implemented event-driven solutions** using **AWS Lambda** with **S3 and API Gateway triggers**, ensuring **real-time data processing and system responsiveness**.
- **Implemented website performance optimization** and addressed **security concerns** in web applications, enhancing **speed, responsiveness, and platform resilience**.

➤ **PepCoding Education Pvt. Ltd.**

September 2021 – March 2022

→ Product Engineer Intern

◎ **Project: NADOS**

- **Created video solutions** of over **200 DSA problems** from easy to hard level for **PepCoding's NADOS platform**.
- **Provided in-depth code review, debugging assistance, and clear explanations** in **Java and C++** to over **1000 students** as a **DSA Problem Solver and Setter**.

EDUCATION

Guru Tegh Bahadur Institute of Technology, New Delhi
BTech, Electronics and Communication Engineering

2018 - 2022
CGPA: 8.116
